DAY- II

GIT vs GIT HUB

- GIT - Tool runs on your computer
- GITHUB - Platform run on internet

as GIT is a ~~mag~~ine [Engine]

GITHUB is a cloud storage + collaboration platform..

What is Git?

Git is

- installed on your local system
- Track your code changes
- works offline
- Manage versions

[You can use Git without Github].

Scanned with OKEN Scanner

What is a GitHub..?

Github is:

* cloud platform
* Stores your git repositories online
* Helps teams collaborate
* provides features like PRs, issues, CI/CD

" Github uses Git internally"

Real world example

Git = your local notebook

Github = google drive

Your laptop (Git) ⟷ GitHub (cloud).

How they work together

Step by - Step:

* you write code (local system)
* Git tracks changes
* You commit changes
* You push to git hub..

Scanned with OKEN Scanner

* Github is useless without git
* git is powerful even without github..

Example workflow:

Let's build a project

<open the code in vscode>

```
git init
git add .
git commit -m "Initial commit"
```

⇒ local system git..

Everything is local..

Now connect to github:-

```
git remote add origin <repo-url>
git push -u origin main
```

Now it is online..

" Finally →

" Git is a distributed version control system used to track changes locally, while Github is a cloud-based platform that hosts Git repositories & enables collaboration"..
